

## Lab 1: Setup and basic web server

1. Use this link to get the github repo: <https://classroom.github.com/a/1BzrDEYJ>
2. Update the README with your name and lab 1
3. Create the .gitignore file.
4. Get your node.js space setup. Following directions lectures n1 and n2
5. Create a web server that has at least 2 routes and 404, plus 500 page.
6. At least one of the pages should have some dynamic content.
7. Update the readme with any descriptions that are needed and links to test.

Finally make sure you push everything to get github.
