

Lab 7: Working with Data and listviews.

1. Use this link to get the github repo: <https://classroom.github.com/a/lmxZEupC>
2. Update the README with your name and lab 7
3. Using Android studio or Visual Studio Code, create a project.
4. Create an array of simple data structure that holds at least one item (ie string)
5. Use that array to fill a listview on the screen. You should use FAB to add new items
6. When you click on an in the listview, you should be able to edit the entry.
 - a. Deleting an entry is completely optional, but you might think about it.Note, you might want to look at the listview_demo as basis for the code.

Turn in:

1. Make sure the readme has been updated.
2. Update the AI use section
3. Add a description of how to run the app. You can include a video of the app working for the grader to review.
4. Finally make sure you push everything to get github.
